TOP 5 ENVIRONMENTAL BENEFITS OF PURCHASING REFURBISHED SERVERS

Refurbished servers refer to used, aged, or returned servers that undergo stringent testing, data eradication, and reconditioning before getting resold with a refurbished tag.

KEY CHARACTERISTICS OF REFURBISHED SERVERS

Refurbished servers have unique attributes that allow IT businesses to cut operating costs without compromising performance and quality.

Professionally certified and well-tested

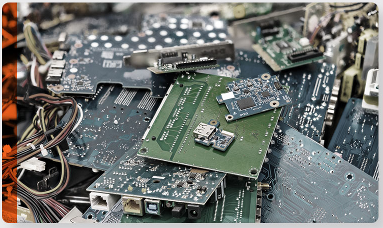
Affordable and customizable

Environmentally-friendly and secure

Reliable and high-performing

ENVIRONMENTAL REASONS TO BUY REFURBISHED SERVERS

Buying refurbished servers is an excellent option for IT businesses to attain their sustainability goals while becoming more environmentally friendly.



E-WASTE REDUCTION

- Minimize e-waste by keeping retired assets out of the landfill
- Prevent the release of toxic materials into landfill due to illegal dumping

RAW MATERIAL PRESERVATION

- Reduce the mining of core minerals required for manufacturing new servers
- Curb the destruction of habitats resulting from the mining of raw materials

CARBON FOOTPRINT REDUCTION

- Minimize air pollution by reducing demand for manufacturing new servers
- Less energy-intensive than manufacturing and shipping new servers

ENVIRONMENTAL COMPLIANCE

- Vendors adhere to environmental and data security laws
- Vendors refurbish and recycle old servers responsibly and securely

RESPONSIBLE ASSET DISPOSITION

- Vendors follow R2 standards for recycling servers with no reuse potential
- Providers professionally wipe data from old servers before disposition
