

5 Key Benefits of Refurbished IT Hardware Procurement

Refurbished IT hardware refers to old, pre-owned, or returned assets that are restored to new high-performing condition for resale via stringent testing and certification. Most refurbished IT assets come with third-party maintenance (TPM) support and an aftermarket warranty.

Why Invest in Refurbished IT Hardware Procurement

Outlined below are the top advantages companies can uncover with refurbished IT hardware procurement:

Cost savings

IT budgets are tight, and organizations are looking to maximize their return on necessary capital expenditures. Depending on the type of refurbished asset, prices can be up to 90% less compared to manufacturer list prices.

High-quality, tested products

Refurbished equipment is strictly tested multiple times throughout the refurbishment process to ensure secure data erasure, extended life, proper function, and high performance.

Reduced carbon footprint

Refurbished IT hardware procurement promotes a circular economy using existing resources and lowers the need for constant energy-intensive hardware manufacturing.

Better warranties and maintenance

Depending on the vendor, refurbished IT hardware can offer better aftermarket warranties than new assets and cost-effective third-party maintenance.

High availability

Refurbishing is applicable for hardware that has been on the market for a long time and whose spare parts are in stock. Also, refurbishment experts store IT equipment directly in their engineering facilities, offering fast turnarounds.

Achieve massive value and hardware performance with CXtec

CXtec is the largest secondary market provider in North America. Our equal2new® product line has been helping thousands of global customers across varied industries with best-in-class, certified, cost-effective, and certified pre-owned IT equipment. It offers:

Huge inventory of top brands & ready-to-ship hardware

99.5% out-of-the-box reliability rating

40% to 90% off list prices

Lifetime warranty with advance replacement

Industry-leading ISO-certified testing & certification procedures

Customized solutions specific to business needs

Customized dedicated account managers
