# 5 Key Reasons Organizations Need a Periodic IT Hardware Refresh

A hardware refresh is a process of replacing or swapping your organization's existing hardware with the latest version of the equipment.

The hardware refresh cycle is a planned technology change that allows your entire organization to flourish.

Why Do You Need IT Hardware Refresh?

Hardware refresh not just provides new and innovative hardware technology but also provides better control of your lifecycle asset management. IT hardware refresh help organizations:

- Improve Performance and Reliability
- Reduce Downtime
- Enhance Productivity and Communication
- Strengthen Security
- Save Costs

How to Plan IT Hardware Refresh Cycle?

Planning your company's hardware refresh cycle requires a few basic steps, including:

- Understand your business needs
- Evaluate current specs and performance stats
- Explore alternative options
- Plan and schedule a periodic IT hardware refresh cycle

Why Choose CXtec?

CXtec has **40+ years of experience** in being a vendor-agnostic partner for organizations worldwide to help build, support, decommission, and upgrade their technology infrastructures.
