GUIDE TO PACKAGING AND PALLETIZING – NETWORKING HARDWARE

- Switches must be stacked on pallet
- Layers of carboard in between each layer (to prevent sliding and scratching on top of units)
- Layer of protection between stacks (to prevent faceplate/port damage)
- Layer of bubble around outside of pallet (to protect outside of switches in transit from other pallets)
- Pallets should be banded down- in addition to being shrink wrapped

✓ **YES!!!**   🚫 **NO!!!**
